Introduction

This document was produced to accompany the MCS5 Derived Variables Dataset. The intention is to provide a suite of comparable longitudinal variables in the main domains of household composition, response, work, education, housing and anthropometry and psychological inventories.

No syntax or code has been included primarily because the variables were computed using SIR (www.sir.com.au) from the CLS survey database, where the variable names and structure of the data are different from the publically available data, and the code would be of little utility. However, the method and sources used are explained, including whether proxy information has been used (where appropriate).

Some variables are not directly comparable across sweeps, therefore it is important to read the documentation for each variable at each sweep before using them in any analysis. For example, the NVQ derived variables are comparable between MCS1 and MCS2, but these are not directly comparable with MCS3, MCS4 and MCS5 because neither the questions asked nor the banding of responses was the same at the later sweeps. NVQ at MCS3, MCS 4 and MCS5 are comparable between themselves however.

MCS5 introduced long format for the person level and cohort member level files, including the parental interview and Cohort Member self completion and assessment files. This format includes data from each cohort member or the main and partner on different rows. This should simplify the process for researchers of merging both parental and cohort member level derived variables with information on the household grid, as well as other person and cohort level files.

As a result of the new long format, the derived variables are being held across three data files, one each for variables held at family, person and cohort member level respectively. The present guide divides the variables that have been derived from MCS5 research data into these three levels of cases.

Education

EDDNVQ00 S5 DV Respondent NVQ equivalent Highest Level (across all sweeps)

Looks at academic and vocational qualifications gained by the MAIN respondent since last interview (ACQU, VCQU) and compares them with the derived NVQ highest level from previous sweeps to ascertain the overall highest level attained across all sweeps.

At MCS5 academic qualifications are collapsed into a 5 point scale:

- 1,3 = 5 "NVQ Level 5"
- 2,4,5 = 4 "NVQ Level 4"
- 6 = 3 "NVQ Level 3"
- 7 = 2 "NVQ Level 2"
- 8 = 1 "NVQ Level 1"
- 95 = 95 "Other academic quals"
- 96 = 96 "None of these"

where

- 1 = Higher Degree and Postgraduate qualifications
- 2 = First Degree (including B.Ed.)
- 3 = Post-graduate Diplomas and Certificates
- 4 = Diplomas in higher education and other higher education qualifications

It looks at PTPC and PRES from HHGRID to ascertain whether the natural mother is resident full-time or part-time, or is in fact deceased. Then, for each person number the variable COPA is checked to see if the non-resident natural mother has contact or not with CM, or is deceased. Finally, if no other status already ascertained, picks up any people flagged as deceased at previous sweeps (MINH).
